Auction in Review

On October 25, we held our annual Auction and once again it was a wonderful experience.

As guests arrived they stopped by the bountiful refreshment table which was filled with drinks, mouthwatering appetizers, and a whole array of delectable desserts. As usual, Emalyl Israel and Martha Bogaards coordinated the hospitality committee and provided the crowd with a wonderful table of delicious treats for the evening.

Our auction tables were stocked with a very nice assortment of ferns, aroids, orchids, bromeliads and many other beautiful tropical plants all wanting new homes.

President Mike Twyford opened the evening by giving general rules of the auction and introducing our very popular and energetic auctioneer, Tom Moore.

The quality of our plants improve every year, and we are always very grateful for the generous donations from our members and our always-reliable commercial nurseries. Patricia Bullis (Bullis Bromeliads) donated six beautiful and colorful bromeliads. Our friends at Silver Krome Nursery (Denis and Bill Rotolante) donated several aroids, plus an unusual Piper, and some very nice Calatheas.

Our members, such as Home Chaovanich (from Thailand), attended the Aroid Show in September and gladly donated a very interesting Dieffenbachia: Ivan Portilla of Ecuagenera (from Ecuador) also left an unusual Anthurium species for our auction. Our members have very unique plants in their collections and were very generous with them. Charles Alford sent a mag-

Maidenhair Foray

People have a natural curiosity about ferns. I suppose being some of the oldest plants on the planet might have something to do with that. They were strange new life forms on our prehistoric earth. However, these strange new life forms have endured and evolved and morphed into what we now have today in our own back yards.

Of course, ferns of old, were huge by today’s standards. They would not fit easily or neatly into modern horticulture. But, as millions and millions and millions of years passed, ferns changed. They took on different shapes, and assumed more compatible and comfortable sizes (however, a few are still a little too large to sit on a plant stand in Aunt Fanny’s parlor, Angiopteris evecta comes to mind).

So, now we have ferns that are perfect for our everyday lives. Ferns that we can easily use to landscape a garden, large or small. Ferns that are there just to look pretty and baffle us, when they don’t behave as we expect them to.

While ferns had long ago adapted to their environments, we have decided to call their environments: zones.

According to the USDA Hardiness Zone finder, the zone that fits most of my plants is Zone 10.

The ferns and other plants that I grow do better here, than let’s say, in zone 6.

While in the past, I have futilely

The Tropical Fern & Exotic Plant Society, Inc.
Officers for 2010

President
Mike Twyford    (305) 444-6332
Vice President
Marie Nock     (305) 232-2257
Secretary
Craig Morell    (305) 667-1173
Treasurer
Tom Moore     (305) 666-0219
Hospitality
Martha Bogaards    (305) 661-2305
Emalyl Israel    (305) 235-0886
Special Sales
Marie Nock     (305) 232-2257
Librarian
Juan Espinosa-Almodovar   (305) 444-3103
Raffle Table
Skye Palmer   (305) 595-9291
Webmaster
Bob Benaim    (305) 793-9755

Board of Directors will consist of the above officers and chairs; and the following individuals.
Steve Forman    (305) 662-2368
Debbie Lamb     (305) 251-8675
Reggie Whitehead   (305) 613-5944

(Maidenhairs continued from page 1)

tried to grow Adiantum pedatum (the Horseshoe Maidenhair) I found in Connecticut years ago. I learned that ferns live where they live, for a natural reason. They grow where they have adapted.

Maidenhairs, were truly popular during the Victorian age, and still are popular today. I was chatting with friends in the Philadelphia area recently, and they had no idea that there were approximately 200 species of Adiantum ferns. I, of course, explained to them that I used to have quite the maidenhair collection. Years ago, after visiting the stunning maidenhair collection of Milton Piedra, I learned to appreciate the beauty and diversity of these plants.

Along with the 200 species of Adiantum, there are myriad cultivars and hybrids out there as well. Most people tend to associate maidenhairs with ‘baby’s breath’ flowers. There is not a great similarity other than the fact that some maidenhair leaflets are tiny, and in some way can resemble ‘baby’s breath’ flowers. However, some of them, for example Adiantum peruvi-anum, or A. macrophyllum, or even A. trapeziforme, have rather large leaves or pinnules.

nificent specimen of the Blue Lycopodium also known as Huperzia gobellei, and a rare Elaphoglossum langsdorffii.

Other members who gave generously to our auction were Tim Anderson (Palm Hammock), Mike Twyford, Vivian Waddell, Steve and Marie Nock, Ann Marie Scherr, Jackie Gaudio, Elliott Brown, Marnie Valent, David Foster, Craig Morell, Phillip Iloo, John DeMott, Michael Ferraro, Debbie Lamb, James Sprague.

The evening could not’ve gone as smoothly, as it did without our auction assistants Debbie Lamb, Michael O’Dea and Reggie Whitehead. We gratefully thank Argeo Hernandez for manning the holding area; and many thanks to Bob Benaim for sitting in as cashier.

Yes, maidenhairs, as well as many other ferns tend to be mysterious plants, however, once you understand them, like anything else, you can grow them.

Today there are only a handful of people that I know of who are cultivating the many different species. Recently I asked my friends about a grower in Philadelphia, Barbara Varga; they’d lost track of her. People who are growing maidenhairs today are Duane Petersen in Wichita, Kansas; Larry and Glenda Weed in Metairie, Louisiana; Ray Roberts of Central Florida Ferns, and Craig Reid of Lord Cheery’s Fern Farm, here in the Redland area of South Florida.

Ah, whatever happened to my own maidenhair collection — I suppose, we could chalk it up to too many [plant] irons in the fire, or that great American novel “Gone With the Wind.” Honestly, the best growing season for my maidenhair ferns was right after Hurricane Andrew. Ironic isn’t it? The oak tree that shelters my pool/patio area where the maidenhairs grew, was pretty much cleaned out by the storm. The opened oak tree branches gave me the proper light to grow these plants to specimen size. However, as the branches grew in and with my busy schedule, the maidenhairs were not able to keep up with the changing conditions. I still have a few maidenhair ferns, but now, other sturdier ferns have taken their place in the collection. — Reggie Whitehead

Raffle Tables for 2010 — 2011

November 22, 2010 .............................................................. Peter Kouchalakos
December 2010 ..................................................................... Holiday Party
January 24, 2011 .................................................................... Sid Gardino
February 28, 2011 ................................................................. Tim Anderson/Redland Nursery
March 28, 2011 ...................................................................... Steve Nock/Philip Iloo
April 25, 2011 ........................................................................ David McLean/Craig Reid
May 23, 2011 ........................................................................... John Lucas/Rebecca & Duane Tannenbaum
There are people who believe that the State of Florida lacks the rich natural beauties that are flaunted by other states; majestic mountains, grand waterfalls, cloistered valleys and geological variety. I must admit that unless you have an unusual fondness for carbonates its geology is rather depauperate. But Florida does have its moments of grandeur. One of those breathtaking moments just occurred.

I would be remiss in not advising you to make a point of visiting Fisheating Creek Wildlife Management Area in Glades County near Lakeport on State Road 78 during the third week of October. That is when thousands of acres of *Coreopsis gladiata* are in full bloom. The air is perfumed with their fragrance and the entire landscape is washed in gold. It is one of the most extravagant floral displays I have ever seen. A scene never forgotten once seen. Florida’s flatness and climate provide the unique flood plain required for this astounding floral extravaganza. I urge you to take the opportunity to experience this natural wonder.

When you get your 2011 calendar do make a notation for an October journey to Glades County. You won’t regret it.
